SEO WORK SAMPLE

Paperloom — free editable template library

283 pages · own project, built and optimised end to end · September 2026

A static template site I built and then audited as a live SEO project: full technical crawl, on-page fixes, structured data, internal linking and Core Web Vitals. Every figure below was measured against the built site before and after the work, not estimated.

MEASURED BEFORE / AFTER

ISSUE FOUND IN AUDIT	BEFORE	AFTER
Pages with a heading-level skip (H2 → H4)	282 / 283	0
Cumulative Layout Shift, mobile (Google fails > 0.1)	0.1295	0.0013
Contextual in-content internal links	0	100
Template pages with no contextual link in their copy	50 / 52	0
BreadcrumbList structured data	0 pages	282 pages
Organization / WebSite schema with SearchAction	absent	present
Pages with og:image (social preview)	0 / 283	283 / 283
Titles over 60 characters	23	0
Meta descriptions over 160 characters	10	0
Render-blocking CSS per page	111 KB	24–53 KB
Horizontal overflow on a 390px mobile viewport	617px wide	none

HOW IT WAS AUDITED

- Crawled and parsed all 283 pages: titles, meta descriptions, heading order, canonicals, viewport, lang and og tags checked on every page rather than a sample.
- Resolved every internal link in the site — 23,119 of them — against the file tree to find broken links and orphan pages.
- Validated all 349 JSON-LD blocks with a real parser; added BreadcrumbList sitewide and Organization/WebSite with a working SearchAction.
- Measured Core Web Vitals in a real 390px mobile viewport using PerformanceObserver, and traced each layout shift to the element that caused it.
- Verified sitemap.xml against the actual page count and confirmed robots.txt.

ALSO DELIVERED

- Keyword research and mapping across 6 categories and 52 subcategories, one primary intent per page, no stuffing.
- 15 original long-form guides written as the site's supporting content, each linked into the relevant category pages.
- Client-facing audit report documenting method, findings and fixes.

SCOPE, STATED PLAINLY

This is a new site with no ranking or traffic history yet. The improvements above are technical and on-page, measured directly against the build. Search Console submission and analytics are the next step, after which ranking and traffic data will exist. I would rather show what was actually measured than present numbers I do not have.
